

S.K.PRAWIN

AI Application developer and Prompt Engineer

+91-7708977037 ✉ prawinsk2005@gmail.com  linkedin.com/in/prawinsk

Summary

Self-driven Information Technology student focused on creating practical, real-world solutions. Quick to learn and apply new concepts, with hands-on experience in developing simple intelligent systems and data projects. Strong problem-solving mindset and a basic understanding of programming and system development. Completed certified training in artificial intelligence. This strengthened my analytical thinking and structured approach to work. I take initiative in projects and learning, consistently aiming to improve my skills and deliver meaningful results. I am looking to grow in a professional environment while building strong expertise in software and AI development.

Skills

Programming & Core: Java(basics), Python, Fundamentals of Machine Learning, Model Training Basics

AI & Core Concepts: Problem Solving, Data Analysis, Machine Learning Fundamentals, Model Training Basics, Data Preprocessing (cleaning & organizing data), Pattern Recognition, Logical Thinking, Model Evaluation and Validation

Experience

AI/ML Intern

June 2025 – July 2025

Icanio Tech School (Remote)

- Worked on end-to-end machine learning workflows including data preprocessing, feature engineering, and model development.
- Implemented and experimented with multiple algorithms such as Linear Regression, Logistic Regression, Decision Trees, Random Forest, AdaBoost, XGBoost, and basic Neural Networks.
- Performed data exploration and visualization to identify patterns, trends, and improve model performance.
- Evaluated models using standard performance metrics and applied basic optimization techniques.
- Used Python libraries including Pandas, NumPy, Scikit-learn, and Matplotlib for analysis and implementation.
- Maintained structured code and project files using Git for version control.

Java Intern

December 2025 – January 2026

Icanio Tech School (Remote)

- Learned core Java concepts including syntax, control structures, and basic object-oriented programming.
- Developed simple programs to understand logic building and problem-solving using Java.
- Gained foundational knowledge in writing clean and structured code.

Projects

AI Proctored Interview System (Axon) | *Python, Streamlit*

- * Developed an AI-powered interview platform with real-time coding workspace and adaptive question generation.
- * Integrated a conversational AI model to analyze candidate responses and dynamically adjust technical questions.
- * Built an in-browser coding environment with live code execution and output logging for technical evaluation.
- * Implemented basic proctoring features such as tab-switch detection, paste blocking, and activity alerts.
- * Designed a structured multi-phase workflow including candidate verification, assessment, and evaluation.

Awards & Certifications

- * **Finalist – Aravind Eye Care Innovation Hackathon (2026):** Developed an ESP32-based smart pressure sensing system for clinical use, improving precision and patient safety.
- * **Google Student Ambassador (Selected):** Cleared selection process and inducted into campus ambassador program.
- * **1st Prize – IT Paper Presentation, NEC Tech Fest 2K25 & 2nd Prize – EEE Paper Presentation:** Recognized for technical research and presentation skills.
- * **NPTEL Certifications:** Python for Data Science (52%), IoT, Edge & Machine Learning (57%).
- * **Industry Simulations (Forge):** Completed virtual experience programs in Data Analytics (Accenture), AI (Cognizant), and Cloud Computing (Verizon).

Education

B.Tech. Information Technology

Dr. Sivanthi Aditanar College of Engineering College, Tiruchendur

Graduated: 2027

CGPA: 7.83 / 10
